

Dr. Evan M. Cohen, Columbia, S.C.: I am the team doc for The University of South Carolina fighting gamecocks. I work year round with the football team on all players and staff top to bottom. I also work with all the athletes from all other sports requesting a D.C.

I am also the team D.C. for the Columbia Inferno which is our ECHL professional hockey team and I have been in that position for 7 years.

On both teams I work hand in hand with some of the best orthopedic surgeons and athletic training

I work hand-in-hand with some of the best orthopedic surgeons and athletic training staffs. It has been a long process, but they are finally seeing the benefits of extremity adjusting ... and I owe all of this to Dr. Hearon.

staffs. It has been a long process but they are finally seeing the benefits of extremity adjusting and my CCEP has been an invaluable tool in showing them we are more than just spine crackers and I owe all of this to Dr. Hearon.

Tell him I said thank you if I haven't said it to him lately. I appreciate all he has given me and I look forward to seeing him soon at one of his seminars.

Dr. Jim Stilley, DC, CCEP, Plymouth Meeting, PA: Learning one new shoulder technique was worth the whole year of classes. As a seasoned chiropractor, I was amazed at how many more patients could be helped, because I took the CCEP courses. When my own shoulder was hurt, I went to five chiropractors to get it treated. The fifth one, a CCEP, is the only one that was able to adjust it and correct 90% of the problem instantly. *If you want to be that 1 in 5 doctor who gets the job done, become a CCEP!*

Dr. Lance Barclay, DC CCEP, Lethbridge, Alberta, CANADA: Probably one of the biggest benefits of the CCEP program is to learn how to find a problem and with that how to fix what you have found. I have done other programs that are great a teaching the chiropractor to find a problem but then does not show how to treat the problem. I have used my knowledge to help many off-the-street people. I have also helped sponsor:

A female body builder to a 5th place national competition.

A currently national level freestyle skier.

A local broom ball team.

A local wheelchair basketball team.

These were all facilitated through the knowledge that I have received through the CCEP program. These sponsorships have helped me get many patients that are in contact with these elite athletes.

Dr. Rick Moxon, DC,CCEP, Fond du Lac, WI: I am a little hesitant on promoting extremity adjusting only because it has made me one-of-a-kind in my area. My practice has changed 10 fold. I can't even imagine where my practice would be without using extremity adjusting. You can work the spine all you want, but if you have a faulty hip, knee, or foot, every time the patient gets up off the table the problem starts up again. It does cut down on the number of visits you will see one patient, but the door opens for so many more new patients because you get your patients better

The CCEP program...has made me one-of-a-kind in my area. My practice has changed 10-fold. I can't imagine where my practice would be without it!

quicker. The word has spread that I can fix extremity problems as well as get your spine fixed faster. I could go on and on, but I think you get the point. Extremity adjusting is a must for every doctor wanting to help his patients. Thanks Dr. Hearon!

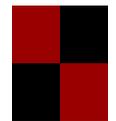

Dr. Gary E. Cleveland, DC, CCEP, CCSP, Manhattan, KS: I have been a practicing CCEP for 10 years. Being a CCEP has expanded my ability to view the body and the extremities globally from a functional, interrelated system of specific testing, correction and re-testing. *Many of the athletes I have treated were amazed how quickly they returned to function in their athletic environment.* The CCEP approach and methods of treatment by Dr. Hearon

Dr. Pierre DesLauriers, DC, CCEP, CSCS, White Rock, B.C., CANADA: I have been a C.C.E.P. since 1996. I received excellent, hands-on training from great instructors. I have used the techniques that I learned every day in practice. As the team chiropractor for a university football team, extremity adjusting is extremely beneficial. *Using the techniques that I learned, I have "saved" many patients from needless surgeries.*

I highly recommend that all chiropractors become CCEPs!
